

CHEMCO OVERWATCH

ACCUBLEND SYSTEM

Accu-Blend System is a PLC operated flow control system that facilitates the blending of simple chemical cleaning formulations to use in your facility. **Accu-Blend** can be used to blend concentrated alkaline or acid materials with water and additives for a safer, cost-effective, and superior cleaner.

CAPABILITIES & BENEFITS

EASE OF OPERATION

The Accu-Blend System Bilingual Touch Screen HMI is like ATM touch screens and is therefore familiar to most users. Operator use is intuitive, and instructions are explained on the screen.

USE CONTROL

Accu-Blend's PLC control and monitoring provides instant or historical usage of chemical levels in bulk containers and individual amounts of products used to make end-of-use (EOU) product for cleaning.

COST CONTROL

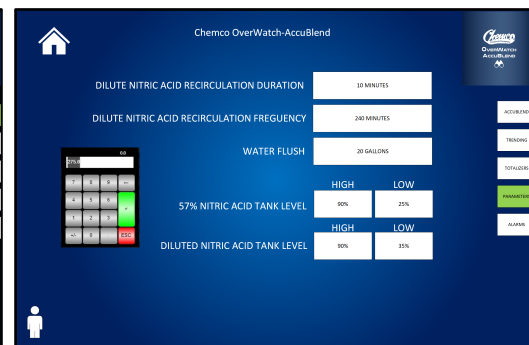

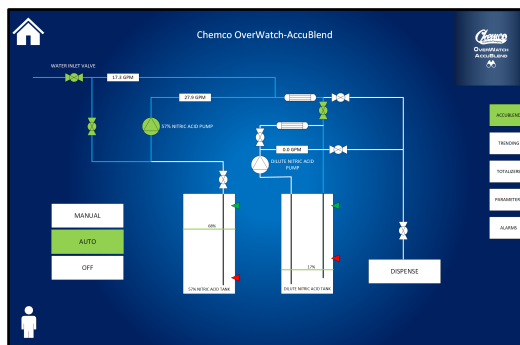

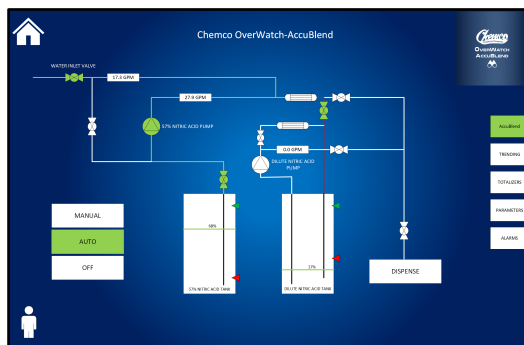

The Accu-Blend System allows you to buy concentrated alkaline or acid products and blend down to the desired formulation for the task. This reduces freight and product costs because you are not shipping water.

ACCURACY

The Accu-Blend System sends a feedback signal to the control unit telling the PLC exactly how much chemical concentrate has been pumped.

MANAGEMENT OVERSIGHT

The Accu-Blend System provides reports to aid in chemical concentration security and inventory control.

Include the **Accu-Spense IMS** unit which is a microprocessor-controlled allocation system that records critical chemical usage data for Sanitation Program Control and Inventory Control purposes.
